DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 and 48, drawn to a method of communication involving transceivers in a hospital environment, classified in class 340, subclass 286.07.
 - II. Claims 2-47, 49-50, and 116-125 drawn to a method and system of wireless communication of data between multiple devices, classified in class 455, subclass 3.01.
 - III. Claims 51-55, drawn to a system involving the application of database schema and data structures in a medical environment, classified in class 707, subclass 104.1.
 - IV. Claims 56 and 57, drawn to a system involving determining the compatibility of medications, classified in class 705, subclass 2.
 - V. Claim 58, drawn to a system involving the counting of the number of times an even occurs, classified in class 702, subclass 176.
 - VI. Claims 59-113 and 115, drawn to a system involving determining the positioning of devices by the reception of wireless signals, classified in class 342, subclass 463.
 - VII. Claim 114, drawn to a system involving determining the location of devices, classified in class 700, subclass 66.

2. The inventions are distinct, each from the other because:

(A) Inventions I-VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention, Invention I has separate utility such as a system involving transmitters and receivers in a hospital environment. Invention II has separate utility such as a wireless distribution system. Invention III has separate utility such as a distributed system involving the application of databases and database structures. Invention IV has separate utility such as a computer-implemented system or method particularly adapted for a management of interactions between medications. Invention V has separate utility such as a system for measuring the quantity of counted events for a unit of time. Invention VI has separate utility such a system involving determining the position of objects by the reception of signals, wherein the objects include more than one transmitter or receiver. Invention VII has separate utility such as a system involving means for determining a location of an element of a device or apparatus under control. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
